## Configuration:

- The Axia Focus 24/7 is the ideal chair for control and monitoring work in 24-hour companies such as emergency rooms and emergency centers.
- An Axia Focus 24/7 guarantees ergonomic seating comfort thanks to the thick, ergonomically shaped cushions and thus contributes to an ideal working environment.
- The chair is equipped as standard with the Dynamic Pelvis Support System, which ensures that the user always receives the correct support of the back thanks to the automatically movable back section.
- The chair is equipped with the patented Axia Split Seat mechanism. The tilting point of the seat is approximately 1/3 from the front of the seat and thus prevents squeezing of the blood circulation or circulation in the legs.
- The chair is dynamically adjustable and can be statically loaded up to 200 kg due to its robust construction. The counter pressure can be adjusted to weight with a rotary knob located at the front center under the seat.
- The robust steel mechanism, with pictograms on the control levers, and the polished aluminum base of Ø 71 cm ensure maximum stability.
- Upholstery standard in black leather combined with fabric "Staccato" by Victor Innovatex (> 1,000,000 Martindale). In addition, you can opt for leather / Camira 24/7 or an all leather version.
- The Axia Focus 24/7 complies with the following standards and certificates: BS 5459/2 (strength / load capacity), GS (safety), EN 1335 (dimensions, strength and safety), NPR-1813, BMA Quality certificate (continuous quality and load tests), ISO 9001, ISO 14001.
- A full 3 year comprehensive factory warranty is offered on the Axia Focus 24/7 chairs based on a 24-hour occupancy.
